

New Assessment Strategy Proposals - Both these strategies align with the philosophy of SBA growth and that more recent grades can have a higher impact on their final grade to reward student growth. Strategy 1 - Final Override Strategy. Strategy 2 - Growth Bonus Strategy.

Final Override Strategy

- SBA remains as the grading rubric
- Every assignment received a percentage grade based on the extent to which the performance meets all the standards.
- Students can always see an accurate reflection of their grades through Canvas
- Categories can be weighted (80% projects, 20% Assignments) via points
- If the grade on their final represents an improvement above their current grade, then the final represents their final grade. Otherwise, it is factored in regularly.

Student Scenarios

Student 1: Consistent Improvement

- **Initial Grades:**
 - Assignments: 70% average
 - Projects: 75% average
- **Current Grade Before Final:**
 - Weighted Grade = $(80\% * 75\%) + (20\% * 70\%) = 74\%$
- **Final Exam Score:** 85%
- **Result:**
 - Since the final exam grade (85%) is higher than the current grade (74%), their **final grade becomes 85%**.

Student 2: Consistent Performance

- **Initial Grades:**
 - Assignments: 90% average
 - Projects: 85% average
- **Current Grade Before Final:**
 - Weighted Grade = $(80\% * 85\%) + (20\% * 90\%) = 86\%$
- **Final Exam Score:** 85%
- **Result:**
 - The final grade (85%) is lower than the current grade (86%), so the final exam is factored into their overall grade as usual.
 - New Grade = $(80\% * 85\%) + (20\% * 85\%) = 85\%$

Student 3: Significant Growth on Final

- **Initial Grades:**
 - Assignments: 60% average
 - Projects: 65% average
- **Current Grade Before Final:**
 - Weighted Grade = $(80\% * 65\%) + (20\% * 60\%) = 64\%$
- **Final Exam Score:** 90%
- **Result:**
 - Since the final exam grade (90%) is significantly higher than the current grade (64%), their **final grade becomes 90%**.

Growth Bonus Strategy

- SBA remains as the grading rubric
- Every assignment received a percentage grade based on the extent to which the performance meets all the standards.
- Students can always see an accurate reflection of their grade through Canvas
- Categories can be weighted (80% projects, 20% Assignments) via points
- Two assignments factor into a growth bonus - the midterm and final
 - If they show growth in the assignments then a 5-10% bonus is added to their final grade

Student Scenarios

Student 1: Moderate Growth

- **Initial Grades:**
 - Assignments: 70% average
 - Projects: 75% average
- **Midterm Score:** 75%
- **Final Exam Score:** 80%
- **Current Grade Without Bonus:**
 - $\text{Weighted Grade} = (80\% * 75\%) + (20\% * 70\%) = 74\%$
- **Growth Bonus:**
 - Improvement from Midterm (75%) to Final (80%) qualifies for a 5% bonus.
 - $\text{Final Grade} = 74\% + 5\% = 79\%$.

Student 2: Minimal Growth

- **Initial Grades:**
 - Assignments: 85% average
 - Projects: 80% average
- **Midterm Score:** 85%
- **Final Exam Score:** 86%
- **Current Grade Without Bonus:**
 - $\text{Weighted Grade} = (80\% * 80\%) + (20\% * 85\%) = 81\%$
- **Growth Bonus:**
 - Minimal improvement from Midterm (85%) to Final (86%) qualifies for a 5% bonus.
 - $\text{Final Grade} = 81\% + 5\% = 86\%$.

Student 3: No Growth

- **Initial Grades:**
 - Assignments: 60% average
 - Projects: 65% average
- **Midterm Score:** 70%
- **Final Exam Score:** 70%
- **Current Grade Without Bonus:**
 - $\text{Weighted Grade} = (80\% * 65\%) + (20\% * 60\%) = 64\%$
- **Growth Bonus:**
 - No improvement between Midterm (70%) and Final (70%) means **no bonus added**.
 - $\text{Final Grade} = 64\%$.

Student 4: Significant Growth

- **Initial Grades:**
 - Assignments: 50% average

- Projects: 55% average
- **Midterm Score:** 55%
- **Final Exam Score:** 80%
- **Current Grade Without Bonus:**
 - Weighted Grade = $(80\% * 55\%) + (20\% * 50\%) = 54\%$
- **Growth Bonus:**
 - Significant improvement from Midterm (55%) to Final (80%) qualifies for a 10% bonus.
 - Final Grade = $54\% + 10\% = 64\%$.
